## Banner 8 and Banner 9 Coexisting

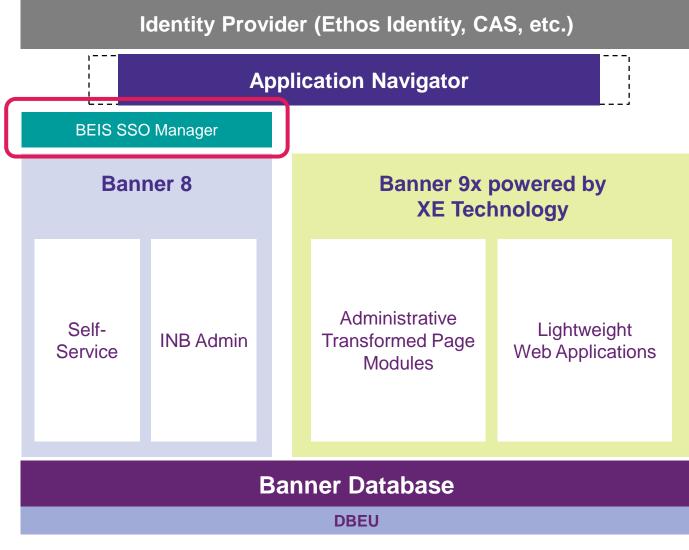

### XE Strategy for Banner

### Tying 8 and 9 together: Identity Management and Single Sign-On

- 1. Banner 8 and Banner 9 can coexist, as long as single sign-on exists.
- 2. Application Navigator is a requirement to deploy Banner 9.x Administrative Applications.
- 3. Application Navigator requires single sign on to be configured via Ethos Identity Service or a CAS server.
- 4. The Banner 9.x applications support single sign on natively but Banner 8 INB does not. For Application Navigator to seamlessly move the user between 9.x Admin pages and Banner 8 INB, single sign on to Banner 8 must be in place.
- 5. Single sign on to Banner 8 requires SSO Manager as a gateway into INB and SSB.

### Where to Start and Example Migration Scenarios

XE Strategy for Banner

### Where to Start?

### Start in BANNER 8

- 1. Identity Management and Single Sign-on
- 2. Ellucian Solution Manager (ESM)
- 3. Catalog and review all Banner customizations if applicable
  - a. Retire customizations that are no longer required
  - b. Compare with new XE for Banner 9.x out of box functionality
  - c. Ellucian services are available to assist with business process review and comparisons with Banner 9.x out of box functionality
  - d. Upload remaining customizations to the XE Guide website forms analyzer tool for a work assessment
- 4. Select and install your first functional application
  - a. Employee Profile or Student Advising Profile are two examples

### Scenario 1 – No Customizations but SSO is NOT enabled in Banner 8

#### Ordered steps to take:

- 1. Install EIS, SSO Manager, and enable single sign on in Banner 8
- 2. Install ESM
- 3. Determine which XE for Banner 9.x application to deploy first, ideally to address your strategic plan goals and primary business needs if you are looking for a place to start, Ellucian recommends Student Advising Profile or Employee Profile
- 4. Determine hardware requirements for the new XE applications, provision them, and add them to ESM
- 5. Use ESM to apply any needed Banner upgrades, install and deploy your new Banner 9.x application

### Why those steps are the best place to start

- 1. EIS delivers cross protocol support and end user password resets
- 2. ESM simplifies and accelerates upgrades and deployments

## Scenario 2 – No Customizations and SSO is enabled in Banner 8

### Ordered steps to take:

- 1. Install Ellucian Solution Manager in Banner 8
- 2. Determine if replacing the CAS Server with EIS would simplify SSO across the organization (usually true), but SSO with CAS will work
- Determine which Banner 9.x application to deploy first, ideally addressing strategic plan goals – if you are looking for a place to start, Ellucian recommends the Student Advising Profile or Employee Profile
- 4. Determine hardware requirements for the new applications, provision them, and add them to ESM
- 5. Use ESM to apply any needed Banner upgrades, install and deploy the new applications

# Scenario 3 - Some Modifications and SSO is NOT enabled in Banner 8

### Ordered steps to take:

- 1. Install EIS, SSO Manager, and enable single sign on in Banner 8
- 2. Catalog and eliminate any un-needed Banner 8 Modifications
- 3. Install ESM
- 4. Determine which 9.x applications to deploy first, ideally addressing strategic plan goals for your first application, if you can, choose an app that you can implement vanilla
- 5. Determine if any mods need to move into Banner 9.x and plan their redesign/conversion
- 6. Determine hardware requirements for the new 9.x applications, provision them, and add them to ESM
- 7. Use ESM to apply any needed Banner upgrades, install and deploy new applications

# Scenario 4 - Some Modifications and SSO is enabled in Banner 8

### Ordered steps to take:

- 1. Install Ellucian Solution Manager in Banner 8
- 2. Determine if replacing the CAS Server with EIS would simplify SSO across the organization (usually it absolutely does!) but SSO with CAS will work
- 3. Catalog and eliminate any un-needed Banner 8 modifications
- 4. Determine which 9.x applications to deploy first, ideally addressing strategic plan goals– for your first application, if you can, choose an app that you can implement vanilla
- 5. Determine hardware requirements for the new 9.x applications, provision them, and add them to ESM
- 6. Determine if any mods need to move into 9.x and plan their re-design
- 7. Use ESM to apply any needed Banner upgrades, install and deploy the new applications

### **Places to Find More Information**

### **eCommunities**

- Banner user community
  - Global Search feature that now pulls from eCommunities, the Ellucian Support Center and the Ellucian.com website

• White papers, webinars, documents, user posts, etc.

### **Download documentation directly from the Support Center**

### **Attend an Ellucian education class**

<u>http://www.ellucian.com/Support-and-Training/Course-Catalog/</u>

### **Contact your Client Partner or Customer Success Manager**

### **Optimize your Internal Resources**

## Are there things you're likely only going to do once as part of this upgrade?

 Potential examples: Install and configure ESM, set-up SSO into Banner 8, or move custom forms from the Banner 8 technology stack to the Banner 9 technology stack

## Does it make more sense to have your staff focus on the repeatable tasks and outsource the one-time responsibilities?

• Ellucian has services to address these one-time responsibilities freeing up your internal folks to focus on your institution's repeatable priorities

### **Contact your Client Partner for more information**

Moving to XE for Banner recording

"Our students have been very excited. It's probably a 95% approval. They love being able to see their classes in a calendar view and the ease of registration."

- Texas Tech University, Dale Ganus, Assistant Managing Director of Information Systems
